NATIONAL TEACHERS COLLEGE

School of Arts, Sciences and Technology
Bachelor of Science in Information Technology

CAPSTONE DOCUMENTATION

Format and Contents Guide

A Discussion Document for Capstone Students, based on the Capstone Documentation Template (June 2026)

How the Documentation Is Organized

Part	Contents and page numbering
Preliminary Pages	Title Page, Approval Sheet, Abstract, Acknowledgment, Table of Contents, List of Tables, List of Figures. Lowercase Roman numerals (i–vii).
Chapter 1	Introduction. Arabic numerals begin here (1, 2, 3…).
Chapter 2	Review of Related Literature and Studies
Chapter 3	Technical Background
Chapter 4	Methodology, Testing, and Evaluation
Chapter 5	Results and Discussion
Conclusions and Recommendations	A separate section after Chapter 5. It is **not** a chapter. Sections are numbered 6.1–6.3 in the template's Table of Contents.
Back Matters	References, Appendices A–D, Curriculum Vitae

General format rules

- Every page carries the college header: National Teachers College, School of Arts, Sciences and Technology, Bachelor of Science in Information Technology.
- Font is **Times New Roman, size 12** throughout. Titles and headings are **bold**.
- Chapter titles are in bold capital letters (for example, **CHAPTER 1: INTRODUCTION**).
- The red "Font:" notes in the template are instructions to you. **Delete them** in your final copy.

Preliminary Pages

- **Title Page (i).** Follows the template order: bold TITLE, optional Subtitle, "A Capstone Project presented to the Faculty of the School of Arts, Science and Technology, National Teachers College, Quiapo, Manila", "In Partial Fulfillment of the Requirements for the Degree of Bachelor of Science in Information Technology", "By" followed by the proponents' names, and the month and year (June 2026).
- **Approval Sheet for Final Defense (ii).** The signed approval of the panel and adviser for your Final Defense. Use the form provided by your respective Capstone Teachers.
- **Abstract (iii).** A one-page summary of the whole study: the problem, the system built, the methods used, and the main results. Write it last.

- **Acknowledgment (iv).** A short thank-you to the adviser, panel, respondents, family, and others who helped.
- **Table of Contents (v), List of Tables (vi), List of Figures (vii).** Headings and page numbers must match your final paper. The page numbers shown in the template are placeholders, so do not copy them. Update these pages last.

Chapter 1: Introduction (The "Why")

Section	What to write
1.1 Project Context	Describe the current situation of the organization. What is the **pain point**? Give the background, the problem, and why it needs solving.
1.2 Purpose and Description	State what your system is and what it is for, briefly and clearly.
1.3 Objectives of the Study	Divided into the general and specific objectives below.
1.3.1 General Objective	The **"what"**. One statement that begins "To develop a system…".
1.3.2 Specific Objectives	The **"how"**. A list that begins with action verbs: *To design, To implement, To test…*
1.4 Scope and Delimitations	Be very specific. **Scope** is what the system does. **Delimitations** are what it does not do. If you are not doing any features that is not feasible kindly state it in **Delimitations.**
1.5 Significance of the Study	Who benefits (users, the organization, future researchers) and how.
1.6 Definition of Terms	Define technical and key terms as you use them in your study. Do not add common terms

Tip: Number your specific objectives carefully. The Conclusions will be checked against them.

Chapter 2: Review of Related Literature and Studies (The "Foundation")

Section	What to write
2.1 Related Literature (Foreign and Local)	Books, articles, and other published writing about your topic.
2.2 Related Studies (Foreign and Local)	Earlier theses, journal studies, and similar systems.
2.3 Synthesis of the Reviewed Literature and Studies	Summarize the **gap**: "Existing systems lack X, which our system provides."

- **Do not copy and paste.** For each source, explain how it relates to your project.
- Organize by theme instead of writing one summary after another.
- Use both foreign and local sources, and cite every source in APA format.

Chapter 3: Technical Background (The "Tech Stack")

Section	What to write
3.1 Overview of Current Technologies	The technologies relevant to your project and the ones you chose (languages, frameworks, database, tools), with reasons.
3.2 Evaluation of the Existing System (Manual or Automated)	How the process is done now, its weaknesses, and how your system improves on it.
3.3 Technical Feasibility	Shows that the system can actually be built and run. Explain it
3.3.1 Hardware Specifications	Minimum and recommended hardware to run your app.
3.3.2 Software Specifications	Operating system, browser, runtime, database, and other required software.
3.3.3 Network/Architecture Specifications	Connectivity requirements and how the parts connect (client, server, database, cloud).

Tip: Present specifications in a table with Minimum and Recommended columns.

Chapter 4: Methodology, Testing, and Evaluation (The "How")

This is the most important chapter for IT students.

Section	What to write
4.1 Software Development Life Cycle (SDLC Model)	Most students use **Agile** or **Iterative**. Explain your sprints or phases and what was done in each. If you are using other SDLC methodologies kindly state step by step.
4.2 Requirements Analysis	How you gathered requirements (interviews, surveys, observation) and the resulting functional and non-functional requirements.
4.3 System Design and Modeling	Summary of the diagrams below that gives your system feasible. Add also the connection based on the user interface
4.3.1 Context Diagram	The system as one process, with its external entities and data flows.
4.3.2 Use Case Diagram	The actors and what each one can do in the system.

Section	What to write
4.3.3 Data Flow Diagram (DFD) or Activity Diagram	How data or activities move through the system.
4.3.4 Entity Relationship Diagram (ERD)	Tables and their relationships. **It must match your actual database tables.**
4.3.5 Data Dictionary	Every table and field: name, data type, size, description, and keys.
4.4 Software Testing Plan	Your overall testing approach, followed by the three levels below.
4.4.1 Unit Testing	Testing individual functions and modules.
4.4.2 Integration Testing	Testing that the modules work together.
4.4.3 System Testing	Testing the complete system against the requirements.
4.5 User Acceptance Testing (UAT) and Evaluation	Explain how you used the **ISO/IEC 25010** standard to let users rate your software: who the respondents are, the instrument, the rating scale, and how scores are interpreted.

- Diagrams must be **technically accurate** and consistent with each other and with the finished system.
- Give every figure and table a number and title and list them in the List of Figures and List of Tables.

Chapter 5: Results and Discussion (The "Output")

Section	What to write
5.1 System Implementation	Shows the finished system.
5.1.1 Main Interface / Dashboard	A clear screenshot of the main screen with a short explanation.
5.1.2 Core Modules Features	Screenshots of your best features, one module at a time, with a description of what each does.
5.2 Evaluation Results (ISO/IEC 25010)	**Data tables** of the survey **mean scores** for each quality characteristic (for example Usability, Security, Reliability), each with its verbal interpretation.
5.3 Discussion of Findings	Interpret the results. What scored high or low, why, and how it relates to your objectives and to the literature in Chapter 2.

- Use clear, readable screenshots. Do not paste blurry or cropped images.
- Never present a table without discussing it in the text.

Conclusions and Recommendations (The "Wrap-up")

This is a separate section that follows Chapter 5. It is not a chapter. The template's Table of Contents numbers its parts 6.1 to 6.3.

Section	What to write
6.1 Summary of Findings	Briefly restate the problem, the system, and the main results.
6.2 Conclusions	Must **directly answer your Objectives in Chapter 1**. If you had 5 objectives, you should have **5 corresponding conclusions**, in the same order.
6.3 Recommendations	Practical suggestions for the organization and for future developers (for example, features you listed under Delimitations). Mostly suggestions of the panelist.

Tip: Conclusions state what was achieved, not new ideas. Recommendations should follow logically from your findings and delimitations.

Back Matters (Appendices)

Item	What to include
References (APA Format)	Every source cited in the paper, listed alphabetically in APA style. Do not list sources you did not cite.
Appendices	The divider page for the appendices, followed by Appendices A to D.
Appendix A: Relevant Source Code Snippets	Only the key portions of code (not the whole program), with short explanations.
Appendix B: User Manual	A step-by-step guide for each type of user, with screenshots.
Appendix C: Survey Instruments / Questionnaires	The actual questionnaires used for requirements gathering and for the ISO/IEC 25010 evaluation.
Appendix D: Grammarian's Certificate / Plagiarism Report	The signed certificate from your grammarian and your plagiarism check report.
Curriculum Vitae	A one-page CV for each proponent.

Final Checklist Before Submission

- ☐ Title page, approval sheet, and all preliminary pages are complete and in order.
- ☐ Times New Roman, size 12, with the college header on every page.
- ☐ Red template instructions removed.
- ☐ Specific objectives numbered and matched one-to-one with the conclusions.
- ☐ Scope and delimitations clearly stated.
- ☐ ERD matches the actual database, and diagrams are consistent with each other.
- ☐ Every table and figure numbered, captioned, discussed, and listed.
- ☐ Table of Contents, List of Tables, and List of Figures page numbers updated.
- ☐ References complete and in APA format.
- ☐ Appendices A to D and the CVs attached.

Follow any updates from your adviser or Capstone Teacher. The official template takes priority.
